## Abstracts

Electric duct heaters are devices that provide heating for air flowing through ductwork. They can be used for various applications, such as space, supplementary, and primary heating, heat recovery, enclosure heating, air drying, and passenger compartment heating. Duct heaters provide enhanced comfort and increased system efficiency by maintaining or accelerating warm air flowing throughout ductwork within a building, especially in areas furthest away from the main HVAC unit. Duct heaters are traditionally used in forced air systems to provide standalone space heat or to supplement existing heating systems. The need for precise temperature control or auxiliary heating is a typical application, but not all duct heaters are created equal. Placing a heat source in a duct ventilation system can be problematic. Each heating source requires heating elements to create and transfer the heat efficiently to the air stream. Electric duct heaters can help achieve energy efficiency and enhanced comfort by adjusting heat output according to the temperature of the air. Electric duct heaters are placed inside air flow ducts out of sight and out of mind unless on a preventive maintenance schedule. In the global market, the core manufacturers of Electric Duct Heater (Electric Duct Heater) are mainly Greenheck, Systemair, Indeecoh, ect. The top five companies within this industry account for about 20% of the market share.
