Abstracts

The electric extended-range tiltrotor aircraft is an aircraft that combines an electric power system with tiltrotor technology. It can take off and land like a helicopter in vertical take-off and landing (VTOL) mode, and can tilt its rotors to fixed-wing mode during horizontal flight to improve flight efficiency. The extended-range function enables it to provide additional range extension through an internal combustion engine or other auxiliary power unit, solving the limitation of battery endurance, and is suitable for scenarios such as urban air travel and short-distance transportation.

The global Electric Extended Range Tilt Rotor Aircraft market size was estimated at USD 1233.29 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
