Abstracts

An electric fairway mower is a specialized turf maintenance machine designed for cutting grass on golf course fairways, utilizing electric power—either through batteries or a hybrid-electric system—as its primary energy source instead of traditional internal combustion engines. These mowers are engineered to deliver precise, consistent cutting quality while significantly reducing noise pollution, emissions, and operational costs associated with fuel and maintenance. Key features often include advanced battery technology for extended runtime, regenerative braking, and integration with fleet management systems for optimized efficiency. By aligning with sustainability initiatives and stricter environmental regulations, electric fairway mowers represent a growing segment within the golf course equipment industry, targeting both municipal and private courses seeking to modernize their maintenance practices.
