Abstracts

An electric grease pump is a grease delivery equipment driven by electricity. It usually consists of a motor, reducer, pump body and control device. Its working principle is to use a motor to drive the eccentric rotor in the pump body to rotate, generating centrifugal force to transport grease from the suction inlet to the discharge port of the pump, and then transport the grease to the parts that need lubrication through pipelines. As the degree of industrial automation increases, the efficiency and intelligence of electric grease pumps will continue to increase. Enterprises will pay more attention to the research and development of intelligent control technology and high-efficiency motors to improve the stability and reliability of electric grease pumps, reduce maintenance costs, and better adapt to various complex working environments.
