Report Overview:

Electric iron is a tool for leveling clothes and fabrics, and the power is generally between 300-1000W. Its type can be divided into: ordinary type, temperature control type, steam spray type and so on. Ordinary irons have a simple structure, they are inexpensive, and are easy to manufacture and maintain. Adjustable temperature iron can automatically adjust the temperature within the range of 60-250 °C and automatically cut off the power according to the different materials used in the appropriate temperature to iron than the average type to save power. The steam spray type electric iron has both temperature control function and steam generation, and some of it is equipped with a spray device, which eliminates the trouble of artificial water spraying, and the clothing material has more uniform wetting and better ironing effect.
