Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Motorcycle Side-Mounted Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The side-mounted motor for electric motorcycles is a drive device installed on the side of the wheel (as opposed to being built into the wheel hub or mounted in the middle of the frame). It is directly transmitted to the rear wheel through gears without the need for a chain or belt intermediary, combining high space utilization (freeing up the middle of the vehicle body to increase storage capacity) with efficient power output (transmission loss is lower than that of a mid-mounted motor) 3810; its global sales in 2024 will be approximately 500,000-800,000 units (reference basis: Wuyang Electric Three sold 30,000 units of similar high-end flat wire motors in two months⁴, coupled with the increased sales of side-mounted motor models from brands such as Yadea and Panhu Power). The average unit price in the market varies greatly due to power differences. The bulk price of low-power models (such as 1-3kW) is approximately RMB 800-1500/unit, and the high-power models (such as 6-15kW) are RMB 2500-4000/unit due to technological premiums (such as axial flux design and integrated energy recovery). The comprehensive average price is approximately RMB 2000/unit.

The global Electric Motorcycle Side-Mounted Motor market size was estimated at USD 187.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
