Abstracts

Electric parking heaters are auxiliary heating systems designed for vehicles, primarily used to preheat the engine and cabin while the vehicle is parked and the main engine is off, operating independently of the engine by drawing power from the vehicle's battery or an external source. These devices are especially valuable in cold climates, as they help reduce engine wear, improve fuel efficiency, decrease cold-start emissions, and enhance passenger comfort by providing warmth before driving. Typically installed in cars, trucks, buses, and recreational vehicles, electric parking heaters can be timer-controlled or remotely activated, offering convenience and energy efficiency compared to idling the engine for heat. The market for these products is driven by demand from regions with harsh winters, growing awareness of vehicle maintenance and emissions reduction, and advancements in automotive comfort technologies.

The global Electric Parking Heater market size was estimated at USD 3250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
