Abstracts

Electric Pod Motor is a type of propulsion system commonly used in marine vessels, characterized by an electric motor housed within a streamlined pod that is mounted externally beneath the hull. This design integrates the motor, propeller, and steering mechanism into a single unit, eliminating the need for conventional shafts, rudders, and stern thrusters. Electric pod motors provide enhanced maneuverability, improved hydrodynamics, and greater energy efficiency, making them ideal for both commercial and recreational vessels. These motors can rotate 360 degrees, offering precise control and enabling dynamic positioning capabilities. Widely adopted in cruise ships, ferries, and yachts, electric pod motors are known for their reduced noise, vibration, and environmental impact, contributing to cleaner and more efficient marine transportation.

The global Electric Pod Motor market size was estimated at USD 109.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
