Abstracts

The electric power steering controller is a device used to control the steering system of a car. It can automatically adjust the steering force to adapt to different driving environments and road conditions, and improve the handling and safety of the car. The structure of the electric power steering controller generally consists of a controller body and one or more sensors. Its working principle is to judge the current driving state and steering by receiving signals from the sensors, such as vehicle speed, steering angle, roll angle, etc. demand, and then send corresponding control commands to the steering system through the controller body to adjust the motor or hydraulic pump of the steering system, so as to realize the increase or decrease of the steering force. The electric power steering controller has many functions, such as: Adaptive steering force: The electric power steering controller can automatically adjust the steering force according to different vehicle speeds and road conditions, so as to achieve the best control and comfort. Generally speaking, the steering force is greater at low speeds and less at high speeds. Variable gear ratio: The electric power steering controller can automatically adjust the gear ratio of the gearbox according to different steering angles and road conditions to achieve the best handling and stability. Generally speaking, the teeth are relatively large at small angles, and the teeth are relatively small at large angles. Active centering: The electric power steering controller can automatically adjust the centering force of the steering system according to the vehicle's driving direction and road conditions, so as to achieve the best straight-line driving and turning recovery. Generally speaking, the righting force is larger when driving in a straight line and smaller when turning.

The global Electric Power Steering Controller market size was estimated at USD 2350.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
