## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pressure Controlling Calibrator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of pressure controlling calibrators will reach approximately 28,000 units, with an average unit price of approximately \$6,800. Pressure controlling calibrators are a type of metrological equipment that utilizes a built-in electric pump or electronically controlled servo system to generate a stable, adjustable pressure source. Combined with high-precision pressure sensors and intelligent control algorithms, they enable rapid, automated calibration of pressure sensors, transmitters, pressure gauges, and related instruments. Compared to traditional manual or pneumatic calibrators, pressure controlling calibrators offer advantages such as stable output, high adjustment accuracy, highly automated operation, and a wide range of applications (covering pressures from vacuum to hundreds of MPa). They are often equipped with color touchscreens, human-machine interfaces, and data storage/wireless transmission capabilities. They are widely used in process control and metrology laboratories in the petrochemical, power, aerospace, pharmaceutical, and high-end manufacturing industries. The upstream supply chain primarily involves high-precision pressure sensors, electric pumps and servo motors, seals and alloy materials, and control electronics modules. The downstream supply chain includes national metrology institutes, third-party calibration agencies, petrochemical and energy groups, aerospace manufacturers, pharmaceutical, and equipment manufacturers. These products are essential equipment for process industries and high-precision metrology assurance.

The global Pressure Controlling Calibrator market size was estimated at USD 190.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
