### Report Overview

Electric PVC Butterfly Valve are typically used for on-off control of water and liquid media compatible with the materials of construction. Ideal where NSF certified construction is required for potable drinking water as well as other industrial applications. These actuated valves use power-to-open and power-to-close, stay in last known position with loss of power. On receipt of a continuous voltage signal, the motor runs and a self-locking all-metal gear drive rotates the disc. The motor is stopped by internal cams striking limit switches. On receipt of a reversing continuous signal, the motor turns in the opposite direction reversing the valve position.
