## Abstracts

Infrared panels work via radiation and consequently minimize heat loss through ventilation as, since the air is not being heated as it would be by a radiator, there is no heated air to escape under doors, cracks or crevices. Rather than heating the space in a room, infrared directly warms up the objects and people in the room ? reducing heat loss as well as putting a stop to dust circulation. This process makes infrared heating panels? a highly efficient, effective and healthier way to heat a property.
