### Report Overview

Welded pipes are pipes that have welded seam across their length. Electric resistance welding (ERW) is one of the many processes of manufacturing welded metal pipes. This process is used to manufacture pipes and tubes with lower wall thickness. In ERW, a flat strip of the metal is passed through a series of rollers to mold them in a cylindrical shape. This cylindrical shaped pipe is then welded by passing a high frequency electric stream between the edges and forcing them together to make a bond.
