Abstracts

Electric robot grippers are specialized end-of-arm tooling devices designed for automated systems, utilizing electric actuators such as servo or stepper motors to provide precise, programmable, and energy-efficient gripping force for tasks including part handling, assembly, packaging, and machine tending. These grippers are characterized by their ability to offer controlled motion, repeatable accuracy, and adaptability to various payloads and geometries, often integrating sensors for feedback on grip status, force, or position. Unlike pneumatic or hydraulic alternatives, electric grippers eliminate the need for external air or fluid supplies, reducing system complexity and enabling cleaner, quieter operation suitable for environments like electronics manufacturing, laboratories, or food processing where contamination or noise must be minimized. Their programmability allows for quick reconfiguration and integration with Industry 4.0 frameworks, supporting applications that demand high flexibility, data exchange, and collaborative robotics.

The global Electric Robot Gripper market size was estimated at USD 185.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
