Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Shopping Cart for Disabled competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Supermarket electric shopping carts are mobile shopping devices equipped with electric drive systems, mainly for the elderly, people with limited mobility or customers who need to shop for a long time. It integrates components such as seats, batteries, motors, steering controls and shopping baskets, allowing users to easily drive and carry goods while shopping, greatly improving the comfort and independence of shopping. Such devices are commonly found in large supermarkets, chain retail stores and airport duty-free areas, helping to improve customer experience and store service quality. With the aging of the population, the increasing requirements for barrier-free facilities and the development of smart retail, electric shopping carts are evolving towards intelligence, humanization and lightweight. Future trends include the introduction of autonomous driving assistance, positioning navigation, anti-collision systems, remote monitoring and management functions, and linkage with shopping mall intelligent systems to achieve data statistics and customer behavior analysis. In addition, environmentally friendly and energy-saving batteries, new materials and modular design have also become product research and development focuses to adapt to more complex retail environments and user needs.

The global Electric Shopping Cart for Disabled market size was estimated at USD 68.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
