Abstracts

Electric spark equipment, also known as electric discharge machining (EDM) equipment, refers to non-traditional machining tools that utilize precisely controlled electrical discharges (sparks) to remove material from electrically conductive workpieces, enabling the production of complex shapes, intricate cavities, and fine features with high accuracy and surface finish that are difficult or impossible to achieve with conventional cutting methods; these systems are primarily categorized into sinker EDM (for molding dies and complex 3D shapes), wire EDM (for cutting intricate profiles and contours using a thin electrically charged wire), and small-hole EDM (for drilling micro-holes), with applications spanning aerospace, automotive, medical device manufacturing, tool and die making, and precision engineering sectors where tight tolerances and hard or exotic materials are common.

The global Electric Spark Equipment market size was estimated at USD 380.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
