Report Overview

Electric suction door is also called magnetic pull-in door. Mainly through the power on and off to control the closing of the door. When electrified, a magnetic force is generated, and the door closes. The power goes out, the magnetism disappears, and the door opens. The door frame (or the edge of the door panel) is equipped with an electromagnetic coil. When the door is opened, a current will pass through the coil, thereby forming an electromagnetic field. In this way, due to the magnetic force, when the door is closed to a close distance from the door frame, the door will be automatically closed. suck on.
