Abstracts

The tea picking machine is a crop harvesting machine that picks the fresh and tender tea leaves from the top of the tea tree. According to different picking methods, there are two types of selective tea picking machines and non-selective tea picking machines. Selective tea picking machines are of break-off type and friction type. The former uses the principle of bending and breaking to pick fresh and tender tea leaves and retain the thick and old branches; the latter uses a pair of elastic fingers to clamp the tea leaves, and rely on the static friction between the fingers and the tea leaves to pick off new leaves and retain the old leaves and young leaves. bud. Due to low production efficiency and high requirements for tea garden operating conditions, selective tea picking machines have not been widely promoted. According to research data from our company's "Engineering Machinery Research Center", the total sales revenue of the top 50 global engineering machinery manufacturers reached 230 billion US dollars in 2022. Asian companies have an absolute advantage, accounting for 50% of sales revenue, followed by Europe, accounting for 26% of sales revenue, and North America, accounting for 23%. The top 50 global host manufacturing companies, Construction Machinery, sold approximately 1.2 million units of construction machinery equipment in 2021, with sales increasing by 9%. China is currently the world's largest factory machinery market, with construction machinery enterprises accounting for 24% of total sales in 2022, making it the country with the highest proportion. According to data from the China Machinery Industry Federation, the operating revenue of the construction machinery industry decreased by more than 12% in 2022. The operating revenue of the Chinese construction machinery industry in 2022 was 797.7 billion yuan, and China's annual export value reached 44.3 billion US dollars, with a net increase in export value of 23.3 billion US dollars in two years.
