Abstracts

Two-wheeled vehicle battery replacement service is defined as the battery replacement and maintenance service for two-wheeled electric vehicles. This service usually requires the establishment of infrastructure such as battery replacement equipment, such as battery replacement cabinets, battery replacement stations, and lithium batteries, followed by the operation of online platforms. The overall service is a self-service model, and end users can replace batteries offline through user-side applications such as mobile phone APP. The battery replacement service model eliminates the need for end users to purchase batteries. The batteries used for battery replacement are replaced and maintained by operators. When using it for the first time, users need to register an account, authenticate their identity, and purchase a package, and scan the code to take out the battery from the battery replacement cabinet for use. When using it again in the future, users can find a nearby battery replacement cabinet through a mobile phone APP, scan the code, put the used battery back into the battery replacement cabinet, and then take out the charged battery from the battery replacement cabinet, and then use it normally. A single battery replacement generally takes less than one minute. Some operators have the ability to develop infrastructure and open up the entire industry chain from lithium battery manufacturing, system integration, and operation services. Some operators also have a strong customer ecosystem and purchase battery equipment through a cooperative model to achieve a strong combination of battery replacement services. The market for electric two-wheelers and their associated batteries is expected to grow significantly due to factors like: Environmental concerns: Electric vehicles produce fewer emissions than gasoline-powered vehicles. Government incentives: Many governments offer subsidies or tax breaks to encourage the adoption of electric vehicles. Technological advancements: Battery technology is continually improving, leading to increased range, faster charging times, and reduced costs.

The global Electric Two-Wheeler Battery Replacement Service market size was estimated at USD 2985.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.80% during the forecast period.
