Abstracts

Traditional furnace heating systems heat the air, which then warms up the people in the room. Heating mat and heating cable work by directly warming the people and objects in a room. This type of heating often feels like the warmth of the sun and because the heat is stored in your floor, it is actually very efficient to run. It is more efficient than baseboard heating and usually more efficient than forced-air heating because it eliminates duct losses. People with allergies often prefer radiant heat because it doesn't distribute allergens like forced air systems can.

The global Electric Underfloor Heating Mats And Cables market size was estimated at USD 1442.83 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
