The optimal operating temperature range of the power battery is about 20-30°C. At low temperature, the battery capacity is low, and the charge and discharge performance is poor; at high temperature, the battery cycle life will be shortened, and safety problems such as explosion may even occur at high temperature. Multiple battery cells form a battery pack in series and parallel mode, and the heat generated during charging and discharging affects each other. Keeping the power battery pack to work within a reasonable temperature range requires a sophisticated electric vehicle battery cooling system. The main components of the electric vehicle battery cooling system are a cooling plate, a cooler, an electronic water pump, and an electronic expansion valve.

The global Electric Vehicle Battery Cooling System market size was estimated at USD 1142.49 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 23.40% during the forecast period.
