## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Vehicle Charging Simulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of electric vehicle charging simulators reached 16,000 units, with an average selling price of US\$28,000. Electric vehicle charging simulators are mainly used to simulate different charging pile protocols and operating conditions, and to verify and test electric vehicles and charging facilities. The upstream involves power semiconductors (Infineon, STMicroelectronics), electronic components (Murata, TDK), test platform chassis and power modules (Ryoden, Delta). Midstream core manufacturers include Chroma, Keysight, NH Research, ITECH, etc., with a single-line production capacity of approximately 2,000-3,000 units and a total production capacity of approximately 20,000 units/year. Downstream customers are new energy vehicle manufacturers (BYD, Tesla, Volkswagen), charging pile operators (ABB, State Grid, Teld) and third-party testing agencies (T?V, UL). The current product gross profit margin remains between 35% and 45%. The future development direction is to support higher power (>500kW), multi-protocol compatibility (V2G, ISO15118), cloud-based remote testing and intelligent operation and maintenance. It is expected to form a strong coupling with the rapid popularization of new energy vehicles and the trend of ultra-fast charging, and the market space will be further expanded.

The global Electric Vehicle Charging Simulator market size was estimated at USD 448.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
