Abstracts

The main functions of configuring a contactor between the battery system and the inverter of an electric vehicle include: isolating when the system stops running, connecting when the system is running, and safely separating the energy storage system from the vehicle's electrical system when the vehicle is turned off or a fault occurs, breaking the circuit, and acting as a power control device in other auxiliary circuits. As governments around the world actively promote the growth of the electric vehicle industry, the electric vehicle contactor industry is in a rapid development stage, driving its market size to continue to expand. In addition, various incentives introduced by governments, such as new energy vehicle subsidy policies, are also accelerating the popularization of electric vehicles, which in turn provides a strong impetus for the further expansion of the electric vehicle contactor industry. In terms of future development, the development of intelligent and digital technologies will promote the transformation and upgrading of the electric vehicle contactor industry. By integrating advanced sensors, controllers and communication technologies, high-voltage DC contactors will achieve more efficient and intelligent control and management. However, electric vehicle contactors need to be replaced regularly because relays will age due to dust accumulation, which may cause system failures. Despite this, leading manufacturers in the industry are actively developing solutions to mitigate this potential risk. This challenge poses a threat to the development of the electric vehicle contactor market. In addition, as a key component of electric vehicles, the design and manufacturing of contactors require a high level of technology. New entrants need to overcome technical difficulties, such as improving product reliability, safety and service life.

The global Electric Vehicle Contactors market size was estimated at USD 1903.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.10% during the forecast period.
