Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Vehicle Electronic Water Pumps competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Water pumps are mainly used in the main cooling system of internal combustion engines, turbocharger cooling circuits and intake intercooling systems, and are also used in the drive system and power battery thermal management system of new energy vehicles. The water pumps in electric vehicles are generally electronic water pumps (also known as "electric water pumps"), which are mainly used for circulating cooling of drive motors, electric components, power batteries, etc. Compared with mechanical water pumps used in thermal management of traditional fuel vehicles, the core components of the thermal management system of new energy vehicles represented by electronic water pumps are mainly used for circulating cooling of drive motors, electric components, power batteries, etc., and the usage and value of each vehicle have increased by 2-3 times. For new energy vehicles, electronic water pumps can also improve energy utilization efficiency, that is, the motor speed is flexibly adjusted according to the needs of the cooling system, and the circulation speed of the coolant is automatically adjusted under different operating conditions of the vehicle to avoid unnecessary energy consumption, which will increase the vehicle's cruising range to a certain extent. From a product perspective, electronic water pumps have become the mainstream choice for new energy vehicles due to their long service life, small size, high precision, low energy consumption, high reliability, compact structure, and strong sealing. They are expected to replace the mechanical water pumps of traditional fuel vehicles in the future. Electric water pumps are evolving from simple coolant circulators to intelligent, integrated components central to EV performance and sustainability. Future trends emphasize smart control, material innovation, and system integration,

driven by demands for energy efficiency, reliability, and adaptability across diverse vehicle segments. As EVs scale globally, EWPs will play a pivotal role in enabling next-gen technologies like ultra-fast charging, autonomous driving, and zero-emission mobility. In terms of product type and technology, the Electric Vehicle Electronic Water Pumps mainly include 12V Electric Water Pump, 24V Electric Water Pump, and Others. 12V Electric Water Pump is a relatively popular and widely used for Electric Vehicles, 12V Electric Water Pump accounting for 58.11% of the Electric Vehicle Electronic Water Pumps global market in 2024. The Electric Vehicle Electronic Water Pumps market will bifurcate into low-voltage (12V/24V) for niche/auxiliary uses and high-voltage systems for mainstream EVs, with innovation focused on smart controls, material science, and integration with next-gen thermal management architectures. Suppliers like Bosch, Rheinmetall, and Nidec will lead in developing voltage-agnostic, modular solutions to cater to diverse global markets. From the perspective of product market applications, Electric Vehicle Electronic Water Pumps mainly include BEV. In 2024, BEV accounted for 69.44% of the total market, Battery Electric Vehicles (BEVs) segment is altered to a 22.16% CAGR throughout this forecast period and will hold a share about 77.27% in 2028. The Electric Vehicle Electronic Water Pumps market will bifurcate, with BEVs driving cutting-edge advancements (high-voltage, smart systems) and PHEVs sustaining demand for hybrid-optimized pumps. Sustainability, connectivity, and regional regulatory shifts will shape both segments, but BEVs will lead long-term growth as global electrification accelerates. At present, major global main manufacturers of Electric Vehicle Electronic Water Pumps include Bosch, GMB, Continental, Valeo, Hanon Systems, Aisin, Rheinmetall Automotive, Gates, MAHLE, Buehler Motor, SANHUA Automotive, Feilong Auto Components, Jiangsu Leili Motor, Yinlun, etc. In 2024, the global three largest players have a share approximately 32% in terms of revenue. It is expected that industry competition will become more intense in the next few years, especially in the Chinese market.

The global Electric Vehicle Electronic Water Pumps market size was estimated at USD 1951.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.30% during the forecast period.
