Abstracts

Level 3 fast charger, also known as a DC fast charger, is a high-speed charging station used for electric vehicles (EVs) that provides direct current (DC) electricity to the vehicle's battery. Unlike Level 1 and Level 2 chargers, which use alternating current (AC), Level 3 chargers can charge an EV much faster by directly converting AC power from the grid into DC power, which is then delivered to the vehicle's battery. Level 3 chargers can typically charge an electric vehicle to 80% in as little as 30 minutes, making them ideal for public charging stations along highways or for fleets with high utilization. These chargers are commonly found in commercial or public spaces and are equipped with high-powered charging connectors, such as CHAdeMO or CCS (Combined Charging System).

The global Electric Vehicle Level 3 Fast Charger market size was estimated at USD 3986.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 27.20% during the forecast period.
