Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Vehicle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An electric vehicle (EV) is a type of automobile that uses one or more electric motors powered by energy stored in rechargeable batteries. Unlike traditional internal combustion engine vehicles, EVs do not rely on gasoline or diesel for propulsion, and they produce no tailpipe emissions. EVs include battery electric vehicles (BEVs), which operate solely on electricity, and plug-in hybrid electric vehicles (PHEVs), which combine an electric drivetrain with a backup internal combustion engine. Electric vehicles are known for their high energy efficiency, low operational cost, and reduced environmental impact. The electric vehicle market is evolving rapidly, driven by advancements in battery technology, changing consumer preferences, and increasing environmental demands. As EVs become more practical in terms of range, performance, and cost, their acceptance among private and commercial users continues to grow. Charging infrastructure is expanding in urban and rural areas alike, improving accessibility and removing a key barrier to adoption. In China, EVs are gaining strong traction across personal, public, and logistics transportation. Local governments have implemented incentives such as registration priority, purchase subsidies, and road access benefits to encourage adoption. At the same time, automakers are accelerating innovation to enhance driving experience, increase efficiency, and expand vehicle choices. The market is gradually transitioning from being policy-driven to competition-driven, where quality, reliability, and user experience are becoming the key factors influencing consumer decisions.

The global Electric Vehicle market size was estimated at USD 544654.0 million in 2025

and is projected to grow at a compound annual growth rate (CAGR) of 15.30% during the forecast period.
