An electric water flosser, also known as an oral irrigator, is a dental hygiene device that uses a pressurized stream of pulsating water to remove food particles, plaque, and bacteria from between teeth and below the gumline, offering an alternative or supplement to traditional string flossing. It is designed to improve gum health, reduce bleeding and inflammation, and enhance overall oral cleanliness, particularly for individuals with braces, implants, bridges, or other dental work that makes conventional flossing challenging. The device typically consists of a motorized base unit with water reservoir, a handheld nozzle, and interchangeable tips for customized use, operating on either rechargeable battery or electricity and featuring adjustable pressure settings to accommodate user sensitivity and preferences.
