The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Window Regulator Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The operating principle of the window regulator motor is to drive the gear system through the rotation of the electric motor, thereby changing the position of the window. Depending on the circuit design, the window can be raised or lowered until the switch is released or the window reaches the fully open or closed position. The window regulator motor is an important component in modern cars. It provides a convenient and comfortable way to control the raising and lowering of the window. It also improves the safety of the vehicle because the driver can conveniently control the window while driving without having to distract manually turning the window handle. The automotive industry has been pursuing more comfort and convenience, so electric windows have become standard in almost all passenger cars. This has led to a continuous demand for window regulator motors. With the improvement of safety awareness, the requirements for window regulator motors in terms of safety performance have also become higher and higher. With the increasing global awareness of environmental protection and the government's support for green travel, the electric vehicle market continues to grow, driving the increasing popularity of electric window systems. The adoption scope of electric window systems as a standardized and basic function of vehicles continues to expand, driving the continued growth of the market. Intelligence and automation are the development trends of the automotive industry, and they also affect the automotive window motor industry. With the improvement of the level of vehicle intelligence, the window control system needs to have more intelligent functions, and these demands will drive the automotive window motor industry towards intelligence. The advancement of new materials and

manufacturing technology provides opportunities for the automotive window motor industry. The application of new materials can reduce product weight, improve wear resistance and corrosion resistance, and the development of manufacturing technology can also improve production efficiency and product quality. These advances will bring more competitive and high-performance automotive window motor products. With the increasing attention to automotive safety, automotive window motors need to have safety features, such as anti-pinch functions and detection systems to protect the safety of passengers. The demand for safety and occupant convenience is boosting the adoption of automotive safety systems, including power window systems, thereby promoting the demand for window regulator motors.

The global Electric Window Regulator Motor market size was estimated at USD 2586.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 1.80% during the forecast period.
