Report Overview

Electric wire rods are semi-finished steel products, typically hot-rolled from billets, used as raw material for drawing into wires of various diameters. These rods are primarily made from low-carbon or high-carbon steel and are essential in manufacturing applications such as electrical cables, fencing, automotive components, and construction materials. The product is characterized by its consistent cross-section, smooth surface, and high ductility, ensuring it can withstand further processing like cold drawing or galvanizing. Electric wire rods are categorized based on carbon content, tensile strength, and end-use specifications, with standards varying by region (e.g., ASTM, DIN, or JIS). The market demand is closely tied to infrastructure development, energy transmission projects, and industrial growth, making it a key indicator of economic activity in the steel and manufacturing sectors.
