## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Zero Turn Mower competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A zero turn mower is a specialized riding mower that uses two independent drive wheels, similar to a tank, to achieve a virtually zero turning radius. In 2024, global Electric Zero Turn Mower production reached approximately 391 k units, with an average global market price of around US\$ 5200 per unit. The growth of the electric zero turn mower market is primarily driven by growing consumer demand for environmentally friendly, low-noise gardening equipment, improvements in lithium battery technology that improve range and power, increasingly stringent government regulations on fuel-powered gardening equipment, and the demand for efficient, low-maintenance mowing solutions among residential and commercial users. Electric models, with their zero emissions, quiet operation, ease of operation, and intelligent potential, are rapidly replacing traditional gasoline-powered zero turn mowers and becoming the mainstream choice in the mid- to high-end lawn care market.

The global Electric Zero Turn Mower market size was estimated at USD 2035.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
