Report Overview

Electric zoom lenses are optical components used in cameras and imaging systems that allow users to adjust the focal length electronically, enabling smooth and precise zooming without manual rotation. These lenses are widely adopted in professional photography, videography, and surveillance due to their ability to maintain image stability and autofocus accuracy while zooming. Unlike manual zoom lenses, electric variants often integrate with camera systems for automated control, enhancing usability in dynamic shooting environments. Their applications span broadcast media, film production, security systems, and consumer electronics, where remote or automated zoom adjustments are critical.
