This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electrical Grade Polypropylene Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Capacitor film refers to electrical grade plastic film used as dielectric material for film capacitors, which has special requirements for electrical properties, such as high dielectric strength, low loss, high temperature resistance, high crystallinity, etc. Film capacitors made of capacitor film as raw material have the advantages of stable capacitance, low loss, excellent voltage resistance, high insulation resistance, good frequency characteristics, high reliability, etc., and are widely used in electronics, home appliances, communications, electricity, LED lighting, new energy and other fields. Capacitor film is mostly made of polypropylene and polyester as raw materials. Among them, the polypropylene used is generally electrical grade homopolymer polypropylene (high iso-regular homopolymer PP), which has the characteristics of high purity, excellent heat resistance, insulation, chemical stability, impact resistance, etc. The polyester used is generally electrical grade polyethylene terephthalate (electrical grade polyester, PET), which has the characteristics of high dielectric constant, high tensile strength, and good electrical properties.

The global Electrical Grade Polypropylene Resin market size was estimated at USD 702.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
