## Abstracts

Electric Heat Trace Cable is a thermal management technology used to heat pipes, tanks, equipment or other facilities. Its main purpose is to prevent pipes or equipment from freezing or overcooling in cold weather and ensure that fluids remain flowing in the pipes to maintain the smooth operation of industrial processes. Market drivers The driving factors of the electric heating belt market mainly include the following aspects: Global energy structure transformation and energy conservation and emission reduction policies: The increasing demand for efficient and environmentally friendly heating solutions worldwide has promoted the widespread application of electric heating products. The rise of Industry 4.0 and smart manufacturing: Promoted the application of automated and intelligent electric heating systems, and increased the market demand for electric heating products. Frequent extreme climate events: Make the demand for pipeline antifreeze and equipment insulation more urgent, further promote the development of the electric heating product market. Technological progress and industrial upgrading: Domestic electric heating companies continue to improve their production processes, product quality gradually improves, and management capabilities are enhanced. The product standards of a few leading companies can meet the European and American access requirements and are widely recognized worldwide. At the same time, in order to reduce costs and expand the market, electric heating product manufacturers in developed countries or regions in Europe and the United States have gradually transferred production links to emerging economies such as China, South Korea, and India. They cooperate with local companies through DM/EM or the establishment of industrial bases, which has stimulated domestic companies to increase investment in production equipment and technology development, and promoted the industry's technological progress and industrial upgrading. The application fields continue to expand: from the petrochemical field to the traditional fields such as chemical industry and biopharmaceuticals, and combined with the specific needs of the

civil and commercial fields, it has developed a number of application fields such as fire protection pipe antifreeze heating, large public building roof ice melting and skiing, road bridge tunnel ramp snow melting, solar water heater heating, house floor heating, etc. With the continuous maturity of electric heating technology and the reduction of prices, it is expected that the market size of the above fields will continue to expand. In summary, electric heating products, as an efficient and environmentally friendly heating solution, have been widely used and rapidly developed worldwide. In the future, with the continuous advancement of technology and the continuous expansion of the market, electric heating products are expected to achieve application innovation in more fields.
