Abstracts

Electrical muscle stimulation (EMS), also known as neuromuscular electrical stimulation (NMES) or electromyostimulation, is the elicitation of muscle contraction using electric impulses. A significant driver in the Transcutaneous Electrical Nerve Stimulation (TENS) Devices market is the growing demand for non-pharmacological pain management solutions. TENS devices offer a non-invasive and drug-free approach to alleviate various types of pain, including chronic pain, musculoskeletal pain, and post-operative pain. However, a notable challenge in this market is the need for consistent efficacy and patient adherence. Ensuring that TENS devices consistently provide effective pain relief while addressing variations in individual responses and patient compliance presents a significant challenge. Healthcare providers and manufacturers must focus on patient education, personalized treatment plans, and continued research to optimize TENS therapy outcomes and promote its widespread adoption as a valuable tool in pain management.

The global Electrical muscle stimulation market size was estimated at USD 337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
