Electrical computer-aided design (ECAD) comprises electrical and electronic CAD solutions. It is a software for creating and modifying both layouts and diagrams and layouts of electrical circuits such as printed circuit boards (PCB), integrated circuits (ICs), and cabling systems. ECAD software help engineers to create electrical schematic designs and systems seamlessly and at a rapid pace as compared to traditional, by-hand methods with higher accuracy and precision. This software is widely used to automate tasks such as filling out components lists and bills of materials (BoM). ECAD is used for various purposes such as diagramming, 3D assembly, concurrent designing, and generating manufacturing documentation. Industrial automation is a collective term for the realization of information processing and process control such as measurement, manipulation, etc. of machines and equipment or production processes without direct human intervention and according to the desired goals. Automation technology is to explore and study the methods and techniques to realize the automation process.
