An Electrical Power Factor Corrector (PFC) is a device or circuit that improves the power factor in electrical systems, making them more efficient. Power factor is a measure of how effectively electrical power is being used; it ranges from 0 to 1, with a higher power factor indicating more efficient power usage. Poor power factor usually occurs due to inductive loads like motors, transformers, and fluorescent lighting, which cause a phase difference between voltage and current, leading to wasted energy and increased load on the electrical system.

The global Electrical Power Factor Corrector Pfc market size was estimated at USD 2178.21 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
