Abstracts

The electrical safety monitoring system conducts all-round detection of electrical hazards in real time by installing temperature, smoke, overload current, leakage, short circuit, combustible gas, dust and other sensors, and transmits the detection data to the database cloud in real time. Through the cloud computing platform, the data before and after are compared, and the change value per unit time is calculated to make dynamic judgments to avoid false alarms due to environmental factors and improve the efficiency of fire warning. When leakage, short circuit occurs, or overload current, temperature, or smoke exceeds the limit value, on-site and background monitoring platforms will generate alarms in time, and the data can be uploaded to the cloud immediately, and the contact can be notified via SMS, WeChat, or phone within a very short time. In case of emergency, directly notify the fire protection and safety supervision departments.

The global Electrical Safety Monitoring System market size was estimated at USD 425.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
