Report Overview

Electrical Steel, also known as silicon steel, is a ferrosilicon soft magnetic alloy steel with very low carbon content, usually containing 0.5% to 4.5% silicon. The addition of silicon can increase the resistivity and maximum permeability of iron, and reduce the coercivity, iron loss and magnetic aging. Electrical steel usually referred to as cold-rolled electrical steel, can be divided into two major categories including grain-oriented electrical steel and non-oriented electrical steel. Grain-oriented electrical steel, with its easy magnetization direction parallel to the rolling direction, has excellent magnetic properties in this direction including low core loss, high permeability, and low magnetostriction, and is widely used in the transformer industry. Further, it can obtain lower core loss by domain refinement treatment. Meanwhile, non-oriented electrical steel, featured by a random distribution of grain orientation and magnetic isotropy, is widely applicable to the motor industry.

The global Electrical Steel Coil market size was estimated at USD 31560 million in 2023 and is projected to reach USD 50233.37 million by 2032, exhibiting a CAGR of 5.30% during the forecast period.

North America Electrical Steel Coil market size was estimated at USD 8987.78 million in 2023, at a CAGR of 4.54% during the forecast period of 2024 through 2032.
