Abstracts

Electric submersible cables, commonly known as electrical submersible pump cables or ESP cables, are specially designed cables that provide power to submersible pumps used for artificial lift of oil and gas resources, offshore drilling rigs, irrigation, mine dewatering, drinking water supply, sewage treatment plants, industries, fountains, seawater filtration plants, swimming pools, and aquariums. In the oil & gas industry, electric submersible cables are especially designed to withstand high temperature and abrasive environment of the downhole well, wherein the electric submersible pump is installed. These cables provide power to electrical submersible pumps from the surface power source for pumping crude oil from the hydrocarbon reservoir to the well surface. The reliability of the uninterrupted electrical power supply to an electrical submersible pump system in an oil well depends on the performance of the power feed through the equipment utilized for power transfers such as power cable, pig tail connectors, and motor lead cables. Electric submersible cables can be manufactured in either flat or round cross-section. The choice between the two is typically based on space between production tubing and well casing. Selection of high quality electric submersible cables is of utmost importance, as when electric submersible cables fail, maintenance costs rise and production revenue plummets.

The global Electrical Submersible Pump Esp Cables market size was estimated at USD 1342.05 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
