### Report Overview

The electrical submersible pump, typically called an ESP, is an efficient and reliable artificial-lift method for lifting moderate to high volumes of fluids from wellbores. These volumes range from a low of 150 B/D to as much as 150,000 B/D (24 to 24,600 m<sup>3</sup>/d). Variable-speed controllers can extend this range significantly, both on the high and low side. The ESP's main components include: multistaged centrifugal pump, three-phase induction motor, seal-chamber section, power cable and surface controls.

First of all, increasing demand for Electric submersible pumps coupled with the exploration of new energy is expected to result in the growth of the market. The shortage of oil and gas drives the market. Productivity is another key point to encourage customers to use it.
