Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electrically Conductive Adhesives competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Electrically Conductive Adhesives production reached approximately 35794 tonne, with an average global market price of around US\$ 53 per kg. An electrically conductive adhesive is a glue that is primarily used for electronics. The electric conductivity is caused by a component that makes ca. 80% of the total mass of an electrically conductive adhesive. This conductive component is suspended in a sticky component that holds the electrically conductive adhesive together. The particles of the conductive component are in contact to each other and in this way make electric current possible. Market growth drivers: New energy vehicles: The amount of conductive adhesive used in a single new energy vehicle exceeds 300 grams (such as Tesla Model Y), which increases the cost proportion by 5 times and is expected to contribute 38% of the market growth by 2025. Semiconductor packaging: The 2-nanometer process drives the demand for high-end conductive adhesives (such as silver nanowires), with a unit price of 800 yuan/kg. Wearable devices: Flexible conductive adhesive (such as Apple Watch Ultra 3) needs to pass 300000 bending tests. Technological development trends: Nano gold adhesive: improves conductivity and flexibility through morphology control (nanowires/sheets) and composite materials (graphene, carbon nanotubes). Intelligent features such as self-healing, stretchability, and temperature sensitivity will be extended to medical implant devices (such as nerve electrodes). Process upgrade: Inkjet printing and screen printing technologies promote large-scale production, but long-term reliability needs to be addressed (such as stability under repeated deformation). Expansion of application areas: Consumer electronics: flexible circuits, foldable screen electrode printing. Medical health: Biocompatible

conductive adhesive is used for disposable sensors and skin electronics. Energy sector: flexible solar cell electrodes, energy storage device connection components.

The global Electrically Conductive Adhesives market size was estimated at USD 1897.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
