Electro Discharge Machines (EDMs), also known as spark erosion machines, are specialized manufacturing tools that use controlled electrical discharges to remove material from electrically conductive workpieces, enabling the precise machining of complex geometries, intricate cavities, and hard materials?such as hardened steel, titanium, and carbide?that are difficult or impossible to process with conventional cutting methods; the two primary types, sinker (or ram) EDM and wire EDM, differ in their electrode and cutting mechanisms but share the fundamental principle of utilizing repetitive spark discharges in a dielectric fluid to achieve high-precision, non-contact material removal with minimal mechanical stress on the workpiece.

The global Electro Discharge Machines market size was estimated at USD 786.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
