Abstracts

An electro hydraulic jack is a specialized lifting device that integrates an electric motor with a hydraulic system to provide automated or semi-automated lifting capabilities, primarily used in automotive repair, industrial maintenance, and heavy equipment handling. It functions by converting electrical energy into hydraulic pressure through a pump, which then actuates a piston to raise heavy loads with minimal manual effort, offering advantages such as higher lifting capacity, precision control, and reduced operator fatigue compared to traditional manual jacks. These devices are characterized by features like variable lift speeds, overload protection, and portability designs, catering to both professional and high-end consumer markets where efficiency, safety, and reliability are critical.

The global Electro Hydraulic Jack market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
