Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electro-Hydraulic Servo Bending Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The electro-hydraulic servo bending machine is an advanced CNC equipment that uses electro-hydraulic servo synchronous control technology to achieve high-precision sheet bending. It mainly controls the hydraulic system through a servo motor, and the cylinders on both sides achieve synchronous movement under the regulation of a closed-loop feedback system, so that the slider maintains precise position control throughout the bending process. Compared with traditional torsion axis bending machines, it has higher synchronization and repeatability. The equipment is usually equipped with an advanced CNC system that supports multi-axis control, automatic compensation, graphical programming and other functions, and the automation system can be expanded according to actual processing needs. Due to its energy saving, stability and high level of intelligence, the electro-hydraulic servo bending machine has become an important equipment for the modern sheet metal industry to achieve flexible production and improve manufacturing quality.

The global Electro-Hydraulic Servo Bending Machine market size was estimated at USD 462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
