Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electro Hydraulic Servo Valve for Aircraft competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of electro hydraulic servo valve for aircraft reached 37,180 units, with an average selling price of US\$9,654 per unit. Aircraft electro-hydraulic servo valves are small valve core systems that convert electrical signals into hydraulic pressure. They are used to drive actuators such as flight control systems, landing gear, brakes, and engines. They consist of a torque motor/nozzle, valve core and sleeve, position feedback, and a high-cleanliness filter. Emphasis is placed on vibration resistance, temperature resistance, and redundant design. On aircraft, they primarily control high-energy operating conditions such as flight control surfaces/high-lift devices, landing gear retraction and extension, brake steering, and engine/thrust reverse. The upstream of the supply chain consists of high-cleanliness hydraulic component materials and precision machining (valve cores, valve sleeves, nozzles, coils, LVDTs, filter elements) and test benches/cleanroom assembly; the downstream consists of OEMs. The industry gross profit margin is approximately 20-35%.

The global Electro Hydraulic Servo Valve for Aircraft market size was estimated at USD 359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
