Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electro-Hydraulic Synchronous CNC Bending Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The electro-hydraulic synchronous CNC bending machine is a sheet metal forming equipment that uses an electro-hydraulic servo system to control the synchronous movement of the slider and achieves high-precision bending through a CNC system. The equipment controls the flow of the hydraulic cylinder through the electro-hydraulic proportional valves on both sides to achieve left-right synchronization of the slider, and cooperates with the grating ruler to detect the feedback position in real time to ensure accurate and consistent bending angles. The CNC system (usually Delem, ESA, Cybelec, etc.) can programmably control multiple axes (Y1, Y2, X, R, Z1/Z2, etc.), supports multi-step, multi-angle and complex bending processes, and is suitable for large-scale, high-precision production.

The global Electro-Hydraulic Synchronous CNC Bending Machine market size was estimated at USD 188.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
