Report Overview

A permanent magnetic chuck utilizes permanent magnets within an internal assembly. The movement of this assembly under a series of poles will direct the magnetic flux externally (at ON) or internally (at OFF). The switching process is usually undertaken by way of a lever that when connected to an eccentric shaft allows the magnet assembly to move. As the magnetic chuck gets larger, then the friction between the internal magnets and poles increases. Due to this friction, permanent magnetic chucks are not very strong and best served for grinding, light machining or EDM applications.
