### Report Overview

The number of cardiac-related issues such as arrhythmia, cardiac arrest, valve blocks, and heart attack is rising presently. Surgery is a commonly used method to treat cardiac arrest and heart failure, which sometimes or after a period of time, leads to irregular heartbeat. This medical condition is called arrhythmia, which may arise post-cardiac operation or before that. A key method being employed for the treatment of arrhythmia is cardiac mapping. It is a useful approach for its treatment. In cardiac mapping, the areas of cardiac muscles are identified where there is irregular heartbeat, which are subsequently identified and removed. This, in scientific terms, is called ablation.
