Report Overview

An electrochemical gas detector is a safety device that uses electrochemical sensing technology to detect gas concentrations. It is widely used in various environments, including industrial, commercial and residential, to monitor and alarm information about the presence of gas to ensure the safety of people and property. Electrochemical sensors are the core components of electrochemical gas detectors. They contain one or more electrochemical cells, usually redox reaction cells. When the gas to be measured enters the sensor, the gas reacts chemically with the active material in the electrochemical cell. These reactions cause changes in current or potential, which in turn reflect changes in gas concentration.
