## Abstracts

Metal bellows and expansion joints are produced by electroforming, welding, and hydroforming, but only electroformed bellows are seamless and isotropic. Their properties are not compromised by the heat of welding or the strains of cold working. Thin and thick wall, multi-ply and multi-lamina bellows can be easily and cost-effectively electroformed, complete with integrated flanges and end plates. This report focus on Electroformed Metal Bellows market. Electroformed bellows are manufactured by plating a model (mandrel) of the bellows shape with metal and then removing the mandrel by chemical or physical means. With low tooling costs and short manufacturing cycles, bellows electroforming is not only a cheap manufacturing method, but also a perfect prototyping tool.

The global Electroformed Metal Bellows market size was estimated at USD 744.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
